Corn has breached support at 363'3, which if held as resistance, favors a further move lower into 354'2.

Wheat remains bearish below 461'6.

Soybeans is bouncing from rotational support at 855'6.

ZS

May Contract

240 min Chart

Volume-at-Price overlay

Soybean Oil we favor a further retracement below 30.67 targeting 29.45.

ZL

May Contract

240 min Chart

Volume-at-Price overlay

Soybean Meal remains bearish below 266.8 with support shifting higher to 262.8

Lean Hogs Above 71.69 would favor a further extension higher.

Live Cattle Has broken the wedge to the upside which favors a continuation higher into 139/141-144.

Core Methodology

In performing our analyses and making trading decisions, Lakefront Futures & Options, LLC utilizes volume-at-price information and the concepts of Auction Market Theory. Volume-at-price is a valuable tool similar in some ways to Market Profile, which utilizes time-at-price. Volume-at-price is displayed as a histogram along the price (vertical) scale and builds across the chart as traded volume occurs at each price. This view is sometimes referred to as a volume profile or VAP (volume-at-price) profile.

Volume-at-price analysis provides valuable information about what prices have seen the heaviest institutional interest and can give insight into where the smart money is accumulating and distributing. While traditional indicators are often simply derivations of price information, volume-at-price provides unique additional information that is not available to traders only using traditional technical analysis methods.

By applying volume profiles to specific areas of the chart, information can be drawn out of the price action identifying areas of support and resistance as well as trend information. We refer to the areas of heaviest volume within the volume profile histogram as high-volume areas, or HVA's. The location of HVA's and the price action around them are determinants in forming trade setups and determining expectations and the probabilities of subsequent price action.

Volume-at-price analysis is applicable and useful at all degrees of scale, from weekly charts to 1-minute charts and everything in between. Performing this type of analysis in multiple timeframes allows us to integrate the broad view of what the market is doing with the immediate movements at a more granular level. This allows us to take positions that not only have favorable odds of success but that also have very favorable risk/reward metrics.

In performing our analyses for our published reports as well as for our trading calls, we focus only on opportunities that have a minimum expected reward/risk ratio of 2-to-1 or better.
