BONDS COMMENTARY 3/21/2024

Grinding their way higher following FOMC meeting results

OVERNIGHT CHANGES THROUGH 3:16 AM (CT): BONDS +0

The Treasury markets initially returned to a tight trading range after a wide-sweeping hour of price action following the FOMC meeting results, but Bonds and Notes are now grinding their way to the upside coming into this morning's action. No change in rates was a widely expected result, and there was clear relief in the market that the Fed's quarterly economic projections kept a median forecast of 75 basis points in rate

cuts for this year. However, there were 25 basis points in cuts taken out of the forecast for 2025 which has moved from 100 basis points in cuts to 75. Fed Chair Powell said that inflation has eased substantially but is still too high and that they need greater confidence inflation is moving down before the rate cuts, which pressured Treasuries. Soon afterwards, Fed Chair Powell said that risks are two-sided now and that the Fed is likely to cut rates at some point this year, which gave a significant boost to Bond and Note prices. After a relatively quiet week of US data, the market will have a large set of economic numbers to digest this morning. Weekly initial jobless claims are expected to have a mild uptick from the previous 209,000. Ongoing jobless claims are forecast to have a minimal increase from the previous 1.811 million. The March Philly Fed manufacturing survey is expected to have a moderate downtick from February's 5.2. The February Canadian new housing price index is forecast to have a moderate uptick from January's -0.1%. February US existing home sales are expected to have a modest downtick from January's 4.00 million annualized rate. The Conference Board's February reading on leading indicators is forecast to have a minimal uptick from January's -0.4%. Fed Vice Chair Barr will speak during afternoon US trading hours.

TODAY'S MARKET IDEAS:

The CME Fed Watch tool now has a 76% chance of a June rate cut, and that should help to underpin Bonds and Notes. Unless jobless claims and the Philly Fed survey have surprisingly strong results, Treasuries should extend their post-FOMC recovery move. Near-term support for June Bonds is at 119-00 while near-term support for June notes is at 110-14.

NEW RECOMMENDATIONS:

None.

PREVIOUS RECOMMENDATIONS:

None.

BONDS TECHNICAL OUTLOOK:

Note: Data is collected using the closing values of the previous session and calculations and analysis are run at the same time. Technical commentary is based solely on statistical indicators and does not necessarily correspond to any fundamental analysis that may appear elsewhere in this report. Data sources can and do produce bad ticks that can cause computation errors. Please verify before use.

BONDS (JUN) 03/21/2024: The downside crossover (9 below 18) of the moving averages suggests a developing short-term downtrend. Daily stochastics declining into oversold territory suggest the selling may be drying up soon. The close below the 9-day moving average is a negative short-term indicator for trend. The upside closing

price reversal on the daily chart is somewhat bullish. It is a mildly bullish indicator that the market closed over the pivot swing number. The next downside objective is now at 117-100. The next area of resistance is around 119-160 and 120-110, while 1st support hits today at 118-000 and below there at 117-100.

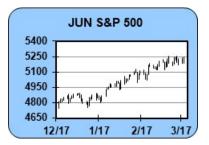

10 YR TREASURY NOTES (JUN) 03/21/2024: A negative indicator was given with the downside crossover of the 9 and 18 bar moving average. Momentum studies are declining, but have fallen to oversold levels. The close below the 9-day moving average is a negative short-term indicator for trend. The market setup is supportive for early gains with the close over the 1st swing resistance. The next downside target is now at 109-235. The next area of resistance is around 110-215 and 111-000, while 1st support hits today at 110-015 and below there at 109-235.

STOCKS COMMENTARY 3/21/2024

FOMC results continue to underpin market early in today's action

OVERNIGHT CHANGES THROUGH 3:16 AM (CT): S&P 500 +25

Global markets have maintained a mostly positive tone coming into this morning's trading session. While the Shanghai Composite closed with a modest loss, other major Asian stock indices finished with sizable gains. European equities and US stock index futures are posting mild to moderate gains early in today's action. Australian unemployment had a larger than expected decline while the Swiss National Bank surprised

the market by cutting Swiss rates. The Bank of England is forecast to hold UK rates unchanged at today's meeting.

S&P 500: After an hour of whipsaw price action, the June S&P maintained upside momentum to reach a record high early in today's action. The Fed kept 75 basis points in rate cuts in their economic projections which provided broad-based support to many market sectors. The Fed was cautious on the outlook for inflation, however, and that may be keeping further gains in check this morning. A surprise quarterly profit by Micron Technologies came with positive guidance which has also boosted Al-related stocks early today. FedEx and Nike will release their latest earnings after today's close, and their performance could shed further light on the overall performance of the US economy.

Other US Indexes: The Dow Jones may benefit from headlines in mainstream media as it reached a new record high with the cash index approaching the 40,000 level for the first time, and is seeing mild gains this morning. Walt Disney's proxy fight and Nike's earnings late today may result in more caution with the Dow, but it will continue to benefit from Fed rate cut expectations for this year. The Nasdaq has benefited from Micron earnings news as well as the FOMC meeting results, but there are reports that the Department of Justice may file an anti-trust lawsuit against Apple which could lead to headwinds for the Nasdaq.

TODAY'S MARKET IDEAS:

While US equity markets may be near-term overvalued, they have been resilient in the face of several negative factors early this year. The major indices have clearly benefited from the FOMC results as the Fed avoided an overly hawkish shift in policy. Even if US economic data disappoints the market later today, a near-term pullback should provide a fresh opportunity to approach the long side of the market. Near-term support for the June S&P is at 5,275 while resistance is up at 5,320. Near-term support in the June Dow Jones is at 39,875. Near-term support in the June Nasdaq is at 18,530.

NEW RECOMMENDATIONS:

None.

PREVIOUS RECOMMENDATIONS:

None.

STOCKS TECHNICAL OUTLOOK:

Note: Data is collected using the closing values of the previous session and calculations and analysis are run at the same time. Technical commentary is based solely on statistical indicators and does not necessarily correspond to any fundamental analysis that may appear elsewhere in this report. Data sources can and do produce bad ticks that can cause computation errors. Please verify before use.

S&P E-MINI (JUN) 03/21/2024: Studies are showing positive momentum but are now in overbought territory, so some caution is warranted. A positive signal for trend short-term was given on a close over the 9-bar moving average. The market has a bullish tilt coming into today's trade with the close above the 2nd swing resistance. The near-term upside objective is at 5342.18. The market is approaching overbought levels with an RSI over 70. The next area of resistance is around 5325.87 and 5342.18, while 1st support hits today at 5263.13 and below there at 5216.69.

MINI-DOW (JUN) 03/21/2024: The upside crossover (9 above 18) of the moving averages suggests a developing short-term uptrend. Daily stochastics have risen into overbought territory which will tend to support reversal action if it occurs. The market's short-term trend is positive on the close above the 9-day moving average. There could be more upside follow through since the market closed above the 2nd swing resistance. The next upside target is 40398. The next area of resistance is around 40246 and 40398, while 1st support hits today at 39684 and below there at 39273.

E-MINI NASDAQ (JUN) 03/21/2024: The downside crossover of the 9 and 18 bar moving average is a negative signal. A bullish signal was given with an upside crossover of the daily stochastics. Stochastics are at mid-range but trending higher, which should reinforce a move higher if resistance levels are taken out. The cross over and close above the 18-day moving average is an indication the intermediate-term trend has turned positive. The market's close above the 2nd swing resistance number is a bullish indication. The next upside target is 18772.00. The next area of resistance is around 18689.50 and 18772.00, while 1st support hits today at 18376.00 and below there at 18145.00.

DOLLAR: The Dollar has seen volatile action over the past 24 hours as it started to lose strength in front of the FOMC meeting results, fell sharply after their release, made an overnight recovery move before pivoting back towards unchanged early in today's action. The "dot plot" still shows 75 basis points in 2024 rate cuts and Fed Chair Powell did not have an overly hawkish tone in his post-meeting comments, both of which fueled a sizable pullback in the Dollar. On the other hand, there was enough concern over inflation in the post-meeting comments to help the Dollar avoid a sharp selloff. While recent US data has seen mixed results, the Dollar will have little tolerance for sluggish US economic numbers this morning and could have another downside leg if the Philly Fed survey and jobless claims disappoint the market.

Other Currencies: The Swiss franc rebounded from a 5 1/2 month low but it is still showing heavy losses this morning. The Swiss National Bank surprised the market with a 25-basis point rate cut with guidance that another rate cut may come in June. With the SNB cutting their inflation forecasts as well, the Swiss franc is likely to remain on the defensive this week. The Pound has fallen back from a 1-week high due to profit-taking in front of the Bank of England MPC meeting results. The BOE is unlikely to cut UK rates, and they may take a hawkish tone with their post meeting comments that can help the Pound regain upside momentum. The Euro has been pressured by talk of a June ECB rate cut, and that may limit further upside during today's trading.

TODAY'S MARKET IDEAS:

The Dollar is holding its ground above the overnight lows, but it needs to avoid disappointing US economic numbers later today. If there are no negative surprises, the Dollar should be able to grind out a mild gain today. Near-term support is at 103.50 as the Dollar will start out with a mild upward bias this morning. Near-term resistance in the June Swiss franc is at 1.1330 as it should remain on the defensive after the surprise SNB rate cut.

NEW RECOMMENDATIONS:

None.

PREVIOUS RECOMMENDATIONS:

Long a May Japanese Yen 68.50/70.50 bull call spread from 28. Use an objective of 176 and risk the entire spread premium on the trade.

CURRENCIES TECHNICAL OUTLOOK:

Note: Data is collected using the closing values of the previous session and calculations and analysis are run at the same time. Technical commentary is based solely on statistical indicators and does not necessarily correspond to any fundamental analysis that may appear elsewhere in this report. Data sources can and do produce bad ticks that can cause computation errors. Please verify before use.

US DOLLAR (JUN) 03/21/2024: The close under the 40-day moving average indicates the longer-term trend could be turning down. Positive momentum studies in the neutral zone will tend to reinforce higher price action. The close under the 18-day moving average indicates the intermediate-term trend could be turning down. The outside day down and close below the previous day's low is a negative signal. The close below the 1st swing support could weigh on the market. The next upside objective is 104.02. The next area of resistance is around 103.45 and 104.02, while 1st support hits today at 102.68 and below there at 102.47.

EURO (JUN) 03/21/2024: The market now above the 60-day moving average suggests the longer-term trend has turned up. Momentum studies trending lower at mid-range should accelerate a move lower if support levels are taken out. The cross over and close above the 18-day moving average is an indication the intermediate-term trend has turned positive. Since the close was above the 2nd swing resistance number, the market's posture is bullish and could see more upside follow-through early in the session. The next downside objective is now at 108.5250. The next area of resistance is around 110.0350 and 110.2650, while 1st support hits today at 109.1650 and below there at 108.5250.

JAPANESE YEN (JUN) 03/21/2024: Momentum studies are still bearish but are now at oversold levels and will tend to support reversal action if it occurs. A negative signal for trend short-term was given on a close under the 9-bar moving average. It is a slightly negative indicator that the close was under the swing pivot. The next downside target is now at 66.52. With a reading under 30, the 9-day RSI is approaching oversold levels. The next area of resistance is around 67.23 and 67.49, while 1st support hits today at 66.74 and below there at 66.52.

SWISS (JUN) 03/21/2024: Momentum studies are declining, but have fallen to oversold levels. The market's close below the 9-day moving average is an indication the short-term trend remains negative. The upside daily closing price reversal gives the market a bullish tilt. The market has a slightly positive tilt with the close over the swing pivot. The next downside objective is now at 112.95. The next area of resistance is around 114.21 and 114.47, while 1st support hits today at 113.46 and below there at 112.95.

CANADIAN DOLLAR (JUN) 03/21/2024: The cross over and close above the 40-day moving average indicates the longer-term trend has turned up. A bullish signal was given with an upside crossover of the daily stochastics. Positive momentum studies in the neutral zone will tend to reinforce higher price action. The cross over and close above the 18-day moving average indicates the intermediate-term trend has turned up. With the close over the 1st swing resistance number, the market is in a moderately positive position. The near-term upside objective is at 74.75. The next area of resistance is around 74.56 and 74.75, while 1st support hits today at 73.90 and below there at 73.41.

BRITISH POUND (JUN) 03/21/2024: Momentum studies trending lower at mid-range could accelerate a price break if support levels are broken. The cross over and close above the 18-day moving average indicates the intermediate-term trend has turned up. There could be more upside follow through since the market closed above the 2nd swing resistance. The next downside target is now at 126.63. The next area of resistance is around 128.40 and 128.67, while 1st support hits today at 127.38 and below there at 126.63.
